PdfPreview Plugin Demo

This is a local sample PDF generated by a script, used to verify the plugin: text selection, search highlight, zoom, rotation, thumbnails, print and download.

What is PDF.js?

PDF.js is a Portable Document Format (PDF) viewer that is built with HTML5. It is used by Firefox and many other products.

Large file support

The viewer renders pages lazily: only pages near the viewport are rasterized, and out-of-view rendering is cancelled on scroll. Range requests stream the document in 64KB chunks when the server supports byte ranges.

Text layer

Every page renders an invisible text layer on top of the canvas, so you can select, copy and search the text like in a native browser PDF viewer.

Search & highlight

Press Ctrl+F (or Cmd+F) to open the find bar. Matches are highlighted across all pages, with match count and case sensitive options.

Shortcuts

f: find t: thumbnails d: download p: print
Ctrl+0: actual size Ctrl++ / Ctrl+-: zoom R: rotate
